

# Go off the map

Choose VSAT and take the office with you

No matter how far you go, keep connected. VSAT is a small satellite terminal that connects your site to the rest of your corporate network. Use it when you need to stay connected, no matter what.

## Wireless in the wilderness

VSAT keeps you connected, even when you're in the middle of nowhere. It's a two-way satellite service we use to connect areas beyond the reach of our terrestrial networks. These include the deep countryside, temporary offices and places ravaged by natural disasters. And it's a useful backup for buildings that need constant data connectivity access.

## Supremely secure

Boost your VSAT connection with Secure Satellite. It gives you a protected connection that's entirely predictable. It's widely used in defence, energy, finance and health as well as government projects.

We'll find the satellite product that's best for your business. Deciding between different manufacturers and technologies. And sharing the benefit of our bespoke service level agreements, relationships with suppliers and unsurpassable experience in the field. We let you:

- choose between small Ka band terminals or larger Ku or C band terminals
- connect back into our terrestrial network
- pick the quality of service you need
- choose a higher grade service level agreement to protect critical applications and sensitive data
- take satellite bandwidth from Intelsat, Eutelsat, SES and our other partners.

## Why work with us?

We're specialists.

We started working with satellites more than 55 years ago, when we tracked Telstar's landmark orbit. Today, we run satellite networks for companies and governments in over 100 countries. Customers in media production and distribution – right across the world – use our satellite links to transmit broadcast-grade video.

Our experts are on hand at Madley Communications Centre 24/7. This means there's always specialist engineers, project managers or manufacturers to speak to.
