

Live Captioning and Subtitling can be complicated and expensive. Breaking news or last minute changes makes it even harder to coordinate with a human captioner, confirm the audio feed is clear and hope the captioner can understand what is being said and get the words right. It's not easy.

VoCaption offers accurate, real-time Speech-to-Text processing across a diverse and expanding language base to assist with emergency captioning and subtitling for breaking news, remotes, files needing last-minute subtitles and support for your human captioners.

As part of a larger solution, VoCaption empowers you to deliver automatic subtitling across the most comprehensive range of linear, OTT and file-based formats on the market today. It can be used stand-alone with a 3rd party subtitling system, but its full benefits are felt when used in conjunction with BroadStream's market-leading Polistream captioning encoder or with integrated playout solution, OASYS, where it can automatically detect the absence of subtitles and implement emergency subtitling automatically and revert to file-playout when subtitles re-appear thus reducing the volume of fines a broadcaster may incur for the temporary loss of subtitles.

Inputs to VoCaption are Line-in, an AES feed or directly from the SDI signal. Speech engine support is achieved by a local VoCaption instance connecting to a cloud-based instance or a local RTVA, Real-Time Virtual Appliance.

Languages Currently Supported

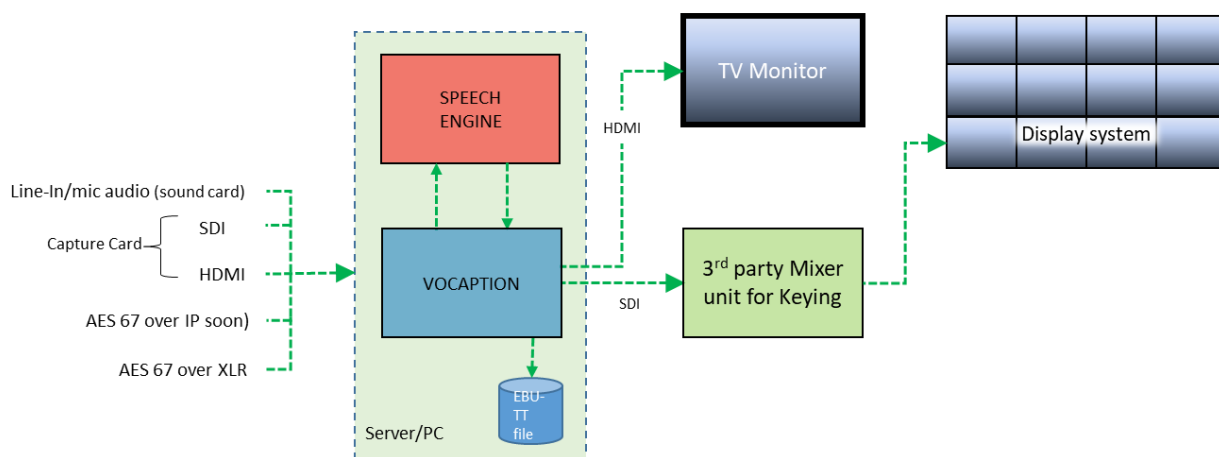

Global English	Japanese
German	Korean
Spanish	Dutch
French	Portuguese

If a language you need is not supported and you can provide material and accurate transcription then we are more than happy to discuss adding and supporting that language.

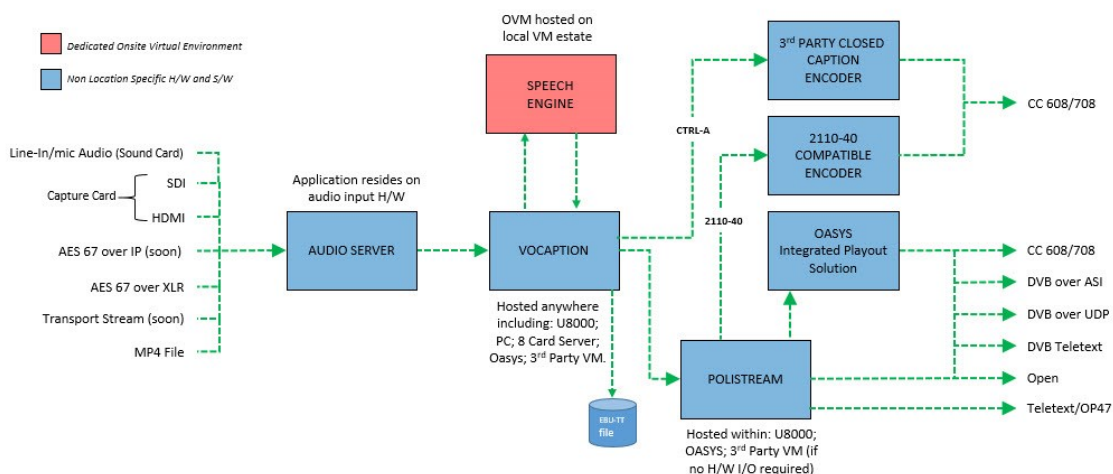

Advantages of using VoCaption as part of your captioning or subtitling workflow:

- Results are automatically recorded to a TTML for archive, compliance, repurposing and metadata harvesting.
- VoCaption is a complimentary product to re-speaking workflows to increase productivity at a reduced cost.
- VoCaption excels at newsroom applications where teleprompters are not available for certain segments or as a way to enable re-speakers to take periodic breaks.
- VoCaption makes it easy for Government, Education, Military and Business meetings and presentations to provide live subtitles for group gatherings to support the presenters and properly include those who need extra assistance due to hearing or language issues.
