

VERITONE ESSENTIALS™

Your AI-Powered Application Suite

Veritone Essentials is your fast and easy route to harnessing AI to analyze your data. Ingest, index, search and organize your audio, video, and images to transform and extend the value of your media.

Data is your greatest asset.

GET MORE OUT OF YOUR DATA WITH AI ANALYTICS

The Veritone Essentials application suite helps you quickly make sense of all your data. Easily ingest your content and index it with one of more than 30 AI capabilities, then choose to search, curate or share it. Our foundational applications augment your existing analytics workflows, helping you jump-start your AI journey and transform and extend your greatest asset (data) in a fraction of the time.

Veritone CMS

Use aiWARE's native content management application — Veritone CMS — to ingest, process, organize and index your content.

Veritone Collections

With Veritone Collections, aiWARE's curation tool, you can efficiently share, embed and distribute cognitively enriched content.

Veritone Discovery

Veritone Discovery, aiWARE's explorer tool, lets you dissect media files and streams with multivariate cognitive search for both one-time and automatic watchlist-driven analytics.

Veritone Library

Veritone Library is aiWARE's knowledge base of public, private and shared repositories. When aiWARE's ecosystem of cognitive engines is at work, they use Library as a reference, comparing results against known identifiers for people, places, and things.
