

FULL CONTROL ON TESTING

M3 is the NetCom Group S.p.A. plug & play platform, based on a distributed architecture, developed to automate and streamline the whole testing process. Developed as a web application, the M3 platform performs black-box testing by using a keyword-driven testing approach. The tester can handle the whole testing process through multi-language script.

M3 platform meets cost reduction, high quality and efficiency, by reducing manual operations: it's a completely code-free approach in which multiple test procedures can be created and edited through a drag & drop GUI, and tests can be run simultaneously or properly scheduled.

M3α: for Automotive applications

M3μ: For Web and Mobile applications

M3τ: For Media and TV's applications
