

StormGeo Studio

// StormGeo Studio opens a lot of possibilities for publishers, such as on-demand weather data for over the top (OTT) playouts, adaptive graphics across different devices and the possibility to offer regionalized weather data to their users and viewers.

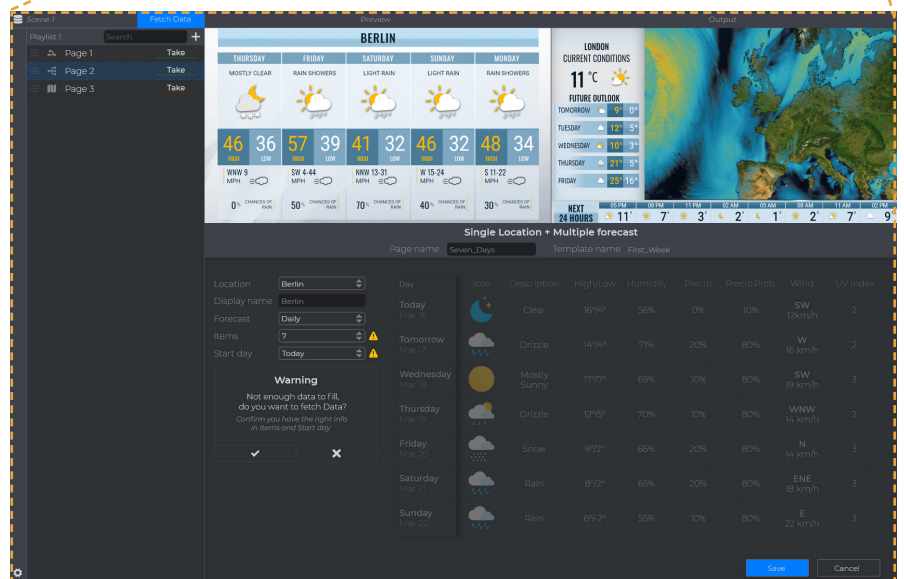

Key features and benefits:

- // Access to world class weather forecasting and data intelligence.
- // StormGeo Studio is a cloud and subscription based software built with award-winning graphics from Singular.Live.
- // Requires no dedicated hardware or upfront investments.
- // Easily integrates into your existing SDI, NDI or streaming media workflows.

Workflow and easily accessible:

- // Built on common web standards.
- // StormGeo Studio API's for interaction, templates and rendering capabilities are easily integrated into your workflow.
- // StormGeo Studio runs across all browser enabled devices without the need for 3rd party plugins.
