

WO ON DEMAND

Say hello to simplified distribution and monetization for podcasts and on-demand audio content

Creating and managing ad content can be cumbersome, and it's difficult to consistently deliver fresh, well-targeted ads. With rapid growth in the consumption of podcasts and other forms of on-demand audio, publishers continue to face monetization challenges.

WO On Demand is a cloud-based, SaaS platform that simplifies management, monetization, and measurement for on-demand audio content, including podcasts. With dynamic server-side ad insertion, robust ad templates, podcast hosting, download/impression/revenue reporting, broadcast-to-podcast functionality, a dynamic RSS engine, and powerful programmatic capabilities, *WO On Demand* includes everything audio publishers need to drive revenue.

WO On Demand can also be paired with *WO Streaming* to provide side-by-side management of your digital audio inventory across channels, and with *WO Ad eXchange* to provide holistic yield optimization across your direct sold and programmatic channels.

WO On Demand allows you to:

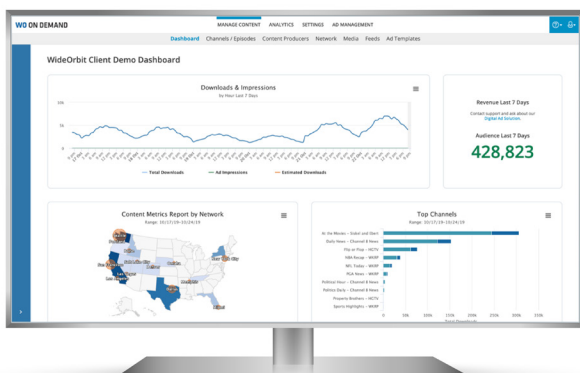

Monetize podcasts and other on-demand content

Save time with streamlined file management

Automate processes including broadcast-to-podcast conversion

WO ON DEMAND IS THE RIGHT CHOICE IF YOUR TEAM IS:

Monetizing podcast and on-demand audio inventory

Operating multiple shows

Generating linear-to-digital content

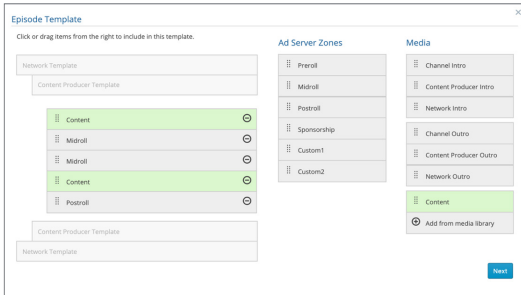

Expanding digital operations

Interested in accessing programmatic revenue opportunities

Distribution and monetization tools purpose-built for podcasts and on-demand audio

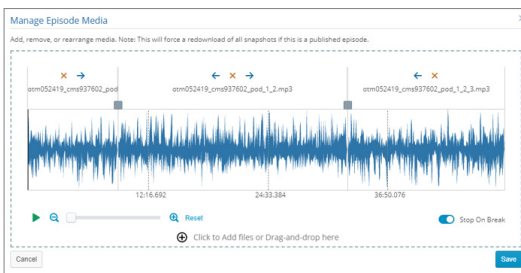

Ad Insertion Template

Dynamic ad insertion templates at the network, content, producer, or channel/episode level

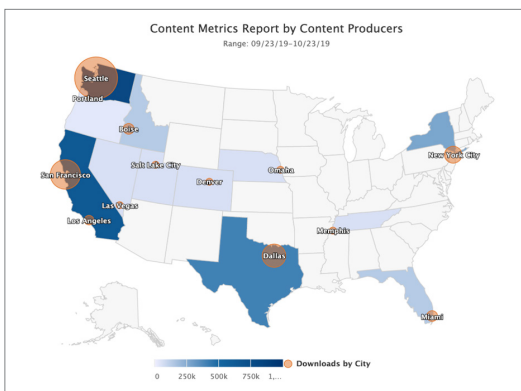

Episodic Editing

In-browser audio controls to add/remove segments and edit insertion points.

Reporting Engine

Generate IAB compliant ad and podcast content metrics to produce reports by time period, network, channel, or episode

Learn more about *WO On Demand* today

Transcoding

Built-in transcoding engine supports all major audio and video formats, set by publisher-defined profiles

```
